

## What is Coliban Quick Connect?

Coliban Quick Connect is the new way Coliban Water is connecting new premises to the potable drinking water and recycled supply system. Coliban Quick Connect is for builders, people connecting services to their land, or changing services on their land.

## How does Coliban Quick Connect work?

Builders, customers or plumbers simply complete an online application at [www.coliban.com.au](http://www.coliban.com.au), pay the connection fee, and we will install their new water meter within 10 business days. Previous Quick Connect Agents are no longer part of the process.

## Can I still sell the meters I have in stock?

Yes. There will be a transition period while we phase in the Coliban Quick Connect program. We will work with you through this transition period.

You can elect to continue to sell the meters up until 30 June 2021, or you can sell the meters to Coliban Water.

## Why the change?

We are in the process of delivering our Digital Metering Program which will see digital data loggers installed on all water meters across our region.

As part of this program, we reviewed the previous process and identified it doesn't fit well with the digital change, and improving it would create a series of benefits for the community.

To achieve these things, we are introducing a new system which gives us greater oversight and accountability of the new connection process, and brings us in line with the rest of the water industry.

## What happens if a connection has been approved under the old system but isn't installed yet?

Existing approved connections will continue to be installed by the Quick Connect Agents. The changes will apply to new connection only.

## Will local plumbers still connect water meters?

Where Coliban Water has already approved a connection, the customer may have their meter fitted under the previous system. The contractor of the Coliban Quick Connect program will have local employees to install water meters compliant with the Coliban Water Digital Metering program. This work includes tapping of the water main, laying of the property services, and installation of the meter assembly.

## How much does a new connection cost?

Connection costs depend on where a customer lives, with full details available as you fill out the online form. Coliban Quick Connect is expected to significantly lower costs to customers.

Extra charges will be applied if a new connection cannot be accessed on the booked date and our contractor is required to return. Customers can avoid this charge by rescheduling up to two days before the initial scheduled booking.

## How does the change help Coliban Water?

Coliban Quick Connect will give us full oversight, making sure all new connections adhere to the required safety, water quality and compliance standards, and access to digital connection data immediately.

This new system allows Coliban Water to take responsibility for our assets and who installs them, the same way power, gas and telecommunications companies do.

New connections are not installed until the payment is made, saving us time and resources on billing and collecting payments.

## How can I find out more?
