

Coliban System Northern

The Coliban System Northern supplies the towns of Bendigo, Axedale, Huntly, Raywood, Sebastian, Heathcote and Tooborac.

The towns can be supplied by the major Coliban Water storages, Lake Eppalock, or the Waranga Western Channel via the Goldfields Superpipe.

Water Summaries are prepared each month to provide current water resource information.

Our Urban Water Strategy outlines our water supply initiatives to meet our region's residential, business and community water needs for the next 50 years.

Our water supply systems have independent sources of water and supply constraints. Please ensure you read the update relevant to your town.

Available raw water supply

Available allocation ¹	Lake Eppalock (our share)	Our storages ²	Total available (Megalitres)
21,862 ML	52,643 ML	1,941 ML	76,446 ML

¹ Allocation against Coliban Water's water shares and carryover from previous year, less water spilt or held in spillable water account. Includes seasonal allocation water sold and transfers into and out of this system
² Includes Sandhurst and Caledonia Reservoirs, but not the portion of the volume in storages on the Coliban River that may be supplied to the system.

The graph below shows the raw water 12-month supply and demand outlook for the Coliban System Northern.

Further system information

> Lake Eppalock

We can access up to 17,440 ML per year averaged over three years from our share of Lake Eppalock.

> Water shares volume

Goulburn - 22,774 ML HRWS
Goulburn - 2,857 ML LRWS
Campaspe - 2,591 ML HRWS
Campaspe - 646 ML LRWS

> Water shares allocation

Goulburn
71% high reliability - 16,170 ML
0% low reliability - 0 ML
Campaspe
97% high reliability - 2,514 ML
0% low reliability - 0 ML

> Allocation trade

Seasonal allocation against bulk entitlements and water shares can be traded on the water market into and out of this system.

> Carryover

Unused allocation may be carried over.

> Spillable Water Account

Any volume held in excess of entitlement is set aside in a spillable water account until the Resource Manager (Goulburn-Murray Water) declares a low risk of spill whereby it is then available for use, or it spills.

> Rural allocation

The 2021/22 rural season opened with 100 per cent allocation.

> Water restriction outlook

Permanent Water Saving Rules (PWSR) apply.

Allocation trade & Superpipe pumping

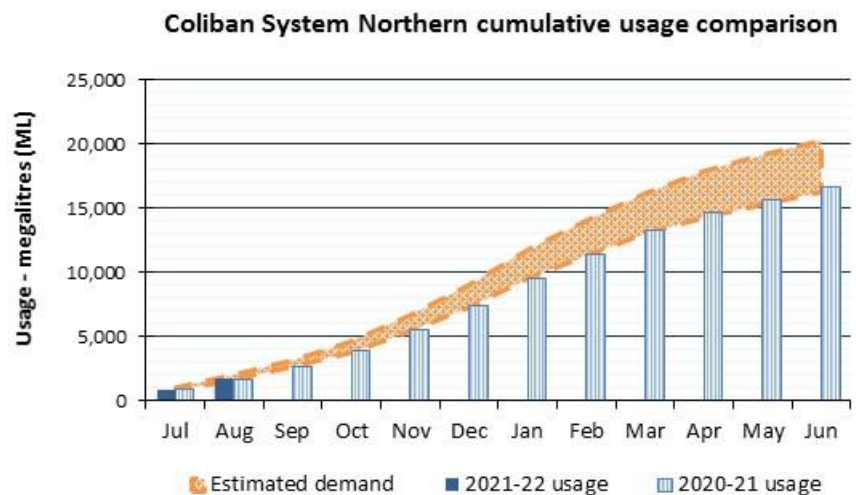

Trade for month ³	Trade to date ³	Pumping for month ⁴	Pumping to date ⁴
6,192 ML	0 ML	0 ML	0 ML

³ Seasonal allocation water transferred to a trading account. Includes transfers into and out of this system.

⁴ Transferred from the Waranga Western Channel or Lake Eppalock to Sandhurst Reservoir. Excludes pumping to Heathcote.

Demand comparison

The graph below shows cumulative water use for the Coliban Northern System compared with the same period last year and estimated demand. The use and demand include urban, rural and losses.

Monthly use by towns

The graphs below show this month's water use for the Coliban System Northern, including rural use, and each town supplied by this system, compared with the same period last year.

Coliban System Southern

The Coliban System Southern supplies the towns of Castlemaine, Kyneton, Maldon, Newstead, Malmesbury, Harcourt, Elphinstone, Tylden and Taradale.

Raw water is supplied by our Coliban River catchment storages: Upper Coliban, Lauriston and Malmesbury Reservoirs, located near Kyneton.

Water Summaries are prepared each month to provide current water resource information.

Our Urban Water Strategy outlines our water supply initiatives to meet our region's residential, business and community water needs for the next 50 years.

Our water supply systems have independent sources of water and supply constraints.

Please ensure you read the update relevant to your town.

Available raw water supply

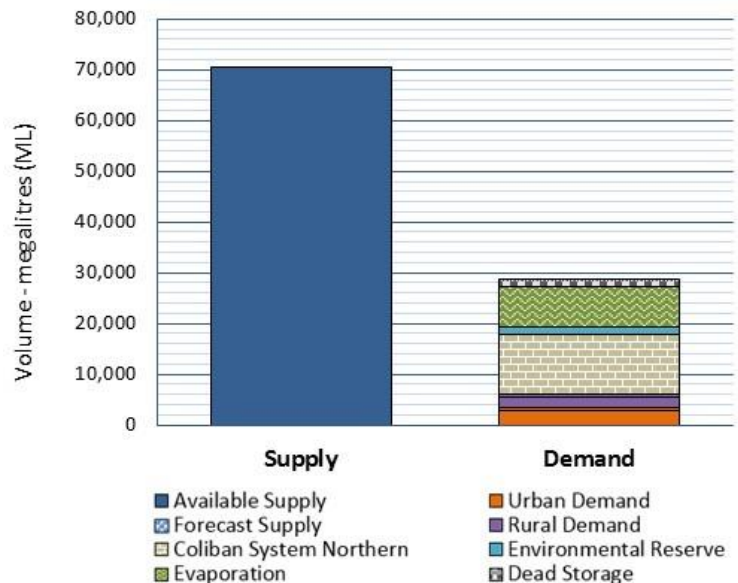

Our storages ¹	Environmental Reserve ²	Holding basins (McCay and Barkers Creek)	Total available (Megalitres)
69,479 ML	0 ML	1,200 ML	70,599 ML

¹ Our storages can also supply Coliban System Northern

² Stored in Malmesbury Reservoir to meet environmental obligations

The graph below shows the raw water 12-month supply and demand outlook for the Coliban System Southern.

**12 month supply and demand outlook
Coliban System Southern**

Further system information

> Rainfall

48 millimetres of rainfall was recorded at Malmsbury Reservoir during August 2021.

> Rural allocation

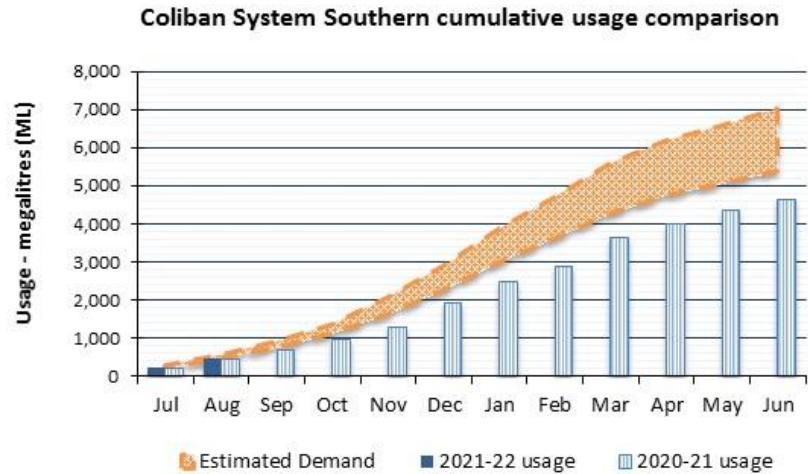

The 2021/22 rural season opened with 100 per cent allocation.

> Water restriction outlook

Permanent Water Saving Rules (PWSR) currently apply.

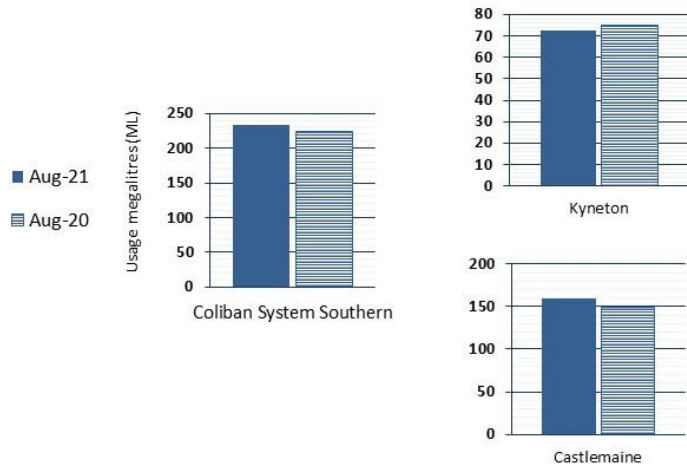

Demand comparison

The graph below cumulative water use for the Coliban System Southern compared with the same period last year and estimated demand. The use and demand include urban, rural and losses.

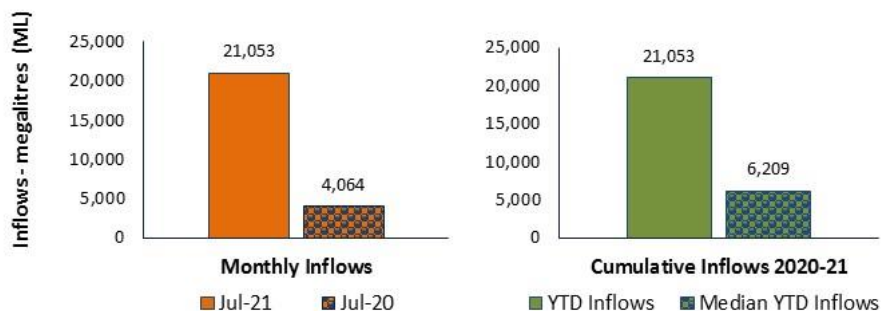

Monthly use by town

The graphs below show this month's water use for the Coliban System Southern, including rural usage, and the towns supplied by this system, compared with the same period last year.

Coliban catchment inflows

The graphs below show this month's inflows for our three major catchment storages near Kyneton, compared with the same period last year and 2020-21 cumulative inflows compared to the cumulative median inflow. The median inflow value represents the mid-point of inflow values from 1975 to 2017.

Campaspe System

August 2021

The Campaspe System supplies the town of Goornong.

Raw water is supplied from the Campaspe River. Goulburn-Murray Water manages flows in the Campaspe River.

Water Summaries are prepared each month to provide current water resource information.

Our Urban Water Strategy outlines our water supply initiatives to meet our region's residential, business and community water needs for the next 50 years.

Our water supply systems have independent sources of water and supply constraints.

Please ensure you read the update relevant to your town.

Available raw water supply

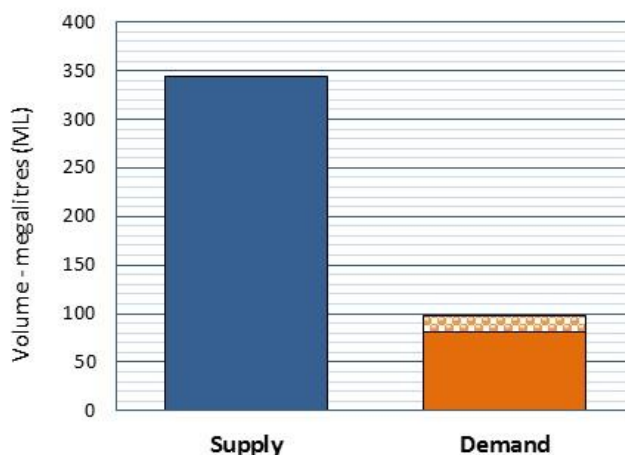

Carryover last year	Allocation to date	Allocation Trade ²	Spillable water ¹	Use to date	Total Available (Megalitres)
15 ML	339 ML	0 ML	0 ML	9 ML	344 ML

¹ Water spill and held in the spillable water account.

² Seasonal allocation water sold during month, year or transferred to a trading account. Includes transfers into and out of this system.

The graph below shows the raw water 12-month supply and demand outlook for the Campaspe System.

**12 month supply and demand outlook
Campaspe System**

Further system information

> **Bulk entitlement volume**
- 349 ML

> **Allocation volume**
- 97% - 339 ML

Note minimum allocation of 50% under Bulk Entitlement

> **Allocation trade**
Seasonal allocation against bulk entitlements and water shares can be traded on the water market into and out of this system.

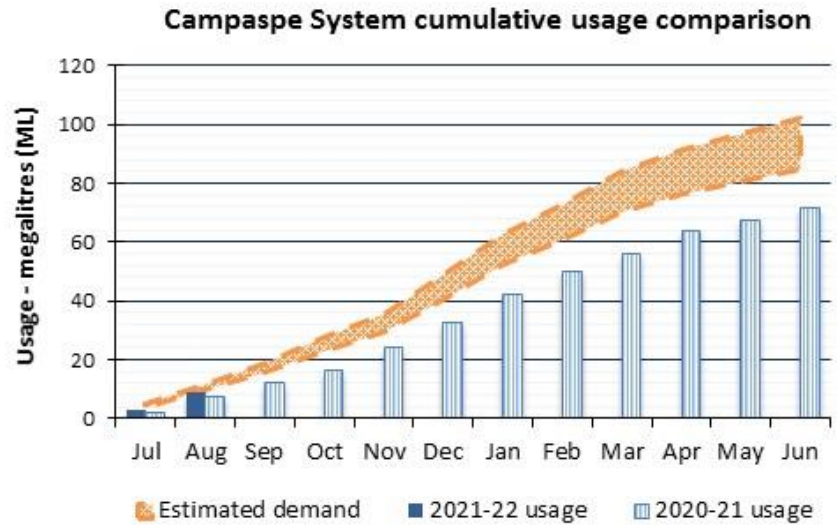

> **Spillable Water Account**
Any volume held in excess of entitlement is set aside in a spillable water account until the Resource Manager (Goulburn-Murray Water) declares a low risk of spill whereby it is then available for use, or it spills.

> **Water restriction outlook**
Permanent Water Saving Rules (PWSR) currently apply.

The restriction levels are based on seasonal allocations and are reviewed monthly.

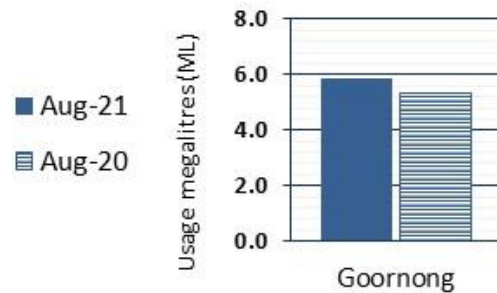

Demand comparison

The graph below shows 2021-22 cumulative water use for the Campaspe System compared with the same period last year and estimated demand.

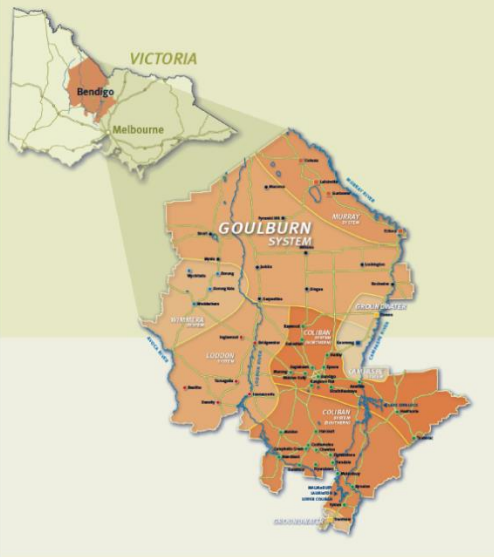

Monthly use by town

The graph below show this month's water use for Goornong compared with the same period last year.

Goulburn System

August 2021

The Goulburn System supplies the towns of Rochester, Pyramid Hill, Boort, Lockington, Mitiamo, Serpentine, Dingee, Jarklin, Mysia and Macorna.

Raw water is supplied from the Waranga Western Channel, which is managed by Goulburn-Murray Water.

Water Summaries are prepared each month to provide current water resource information.

Our Urban Water Strategy outlines our water supply initiatives to meet our region's residential, business and community water needs for the next 50 years.

Our supply systems have independent sources of water and supply constraints. Please ensure you read the update relevant to your town.

NORTH

Legend

⇌ Potable Water

⇌ Raw Water

* Non potable Supply

Available raw water supply

Carryover last year	Allocation to date	Allocation trade	Spillable water ¹	Use to date	Total available (Megalitres)
1,605 ML	2,463 ML	0 ML	1,605 ML	110 ML	2,353 ML

¹ Water spilt and held in the spillable water account.

² Seasonal Allocation water sold during month, year or transferred to a trading account.

The graph below shows the raw water 12 month supply and demand outlook for the Goulburn System.

**12 month supply and demand outlook
Goulburn System**

Further system information

> **Bulk entitlement volume**
- 2,420 ML

Our Goulburn System Entitlement has a very high reliability of supply.

> **Water Allowance**
- 60 ML

Our water allowance has the same reliability as High Reliability Water Shares.

> **Allocation volume**
Bulk Entitlement - 100% - 2,420 ML
Water Allowance - 71% - 43 ML

> **Allocation trade**
Seasonal allocations against bulk entitlements and water shares can be traded on the water market into and out of this system. In average years the total allocation is not required to meet demand.

> **Spillable Water Account**
Restrictions apply to the holding of allocation in excess of 100% of the entitlement volume. The external Resource Manager (Goulburn-Murray Water) may allow this water to be held in a 'spillable water account' until such time as it is either spilt, or credited to an allocation account.

> **Water restriction outlook**
Permanent Water Saving Rules (PWSR) currently apply. The restriction levels are based on seasonal allocations and are reviewed monthly.

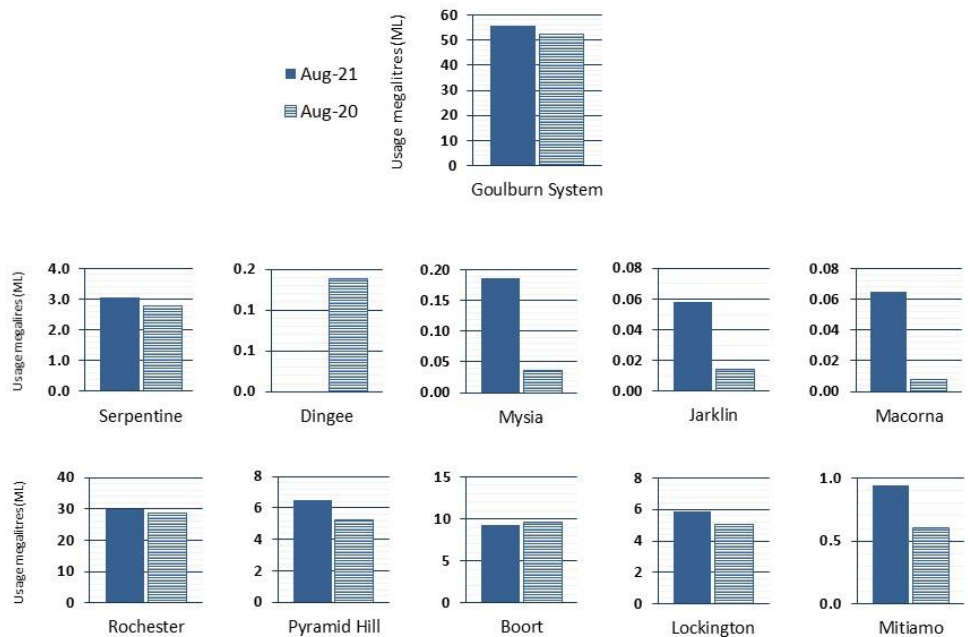

Demand comparison

The graph below shows 2021-22 cumulative water use for the Goulburn System compared with the same period last year and estimated demand.

Monthly use by town

The graphs below show this month's water use for the Goulburn System and each town supplied by this system, compared with the same period last year.

Groundwater System: Elmore

The Elmore System only supplies the town of Elmore.

Raw water is supplied from two groundwater bores.

Groundwater resources are managed by Goulburn-Murray Water under the Lower Campaspe Valley Groundwater Management Area Groundwater Management Plan.

Water Summaries are prepared each month to provide current water resource information.

Our Urban Water Strategy outlines our water supply initiatives to meet our region's residential, business and community water needs for the next 50 years.

Our water supply systems have independent sources of water and supply constraints.

Please ensure you read the update relevant to your town.

communications@coliban.com.au

Available raw water supply

Carryover last year ¹	Allocation to date	Allocation trade	Use to date	Total Available (Megalitres)
71 ML	213 ML	0 ML	10 ML	274 ML

¹ Our groundwater licence allows carryover from the previous year. The maximum carryover is 25% of the entitlement volume.

The graph below shows the raw water 12 month supply and demand outlook for the Elmore System.

**12 month supply and demand outlook
Elmore System**

Further system information

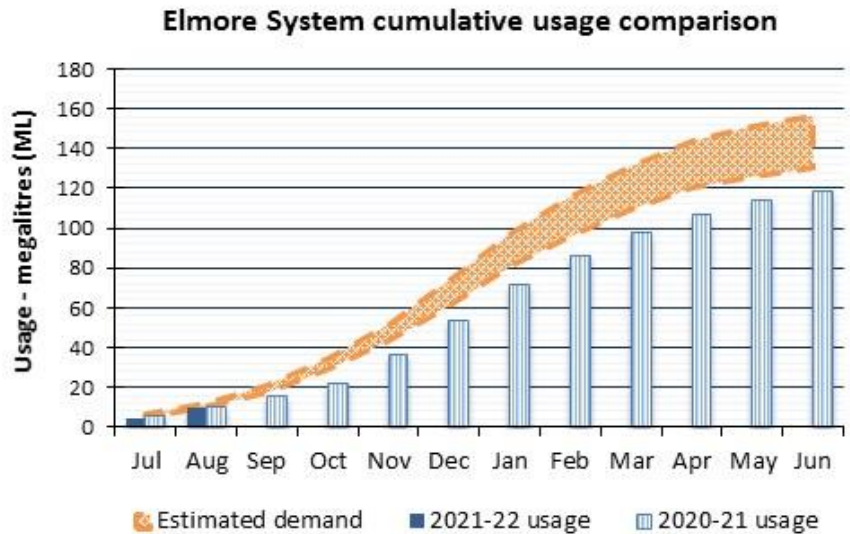

> **Groundwater licence volume**
- 284 ML

> **Allocation volume**
- 75% - 213 ML

> **Water restriction outlook**
Permanent Water Saving Rules (PWSR) currently apply.
The restriction levels are based on seasonal allocations and are reviewed monthly.

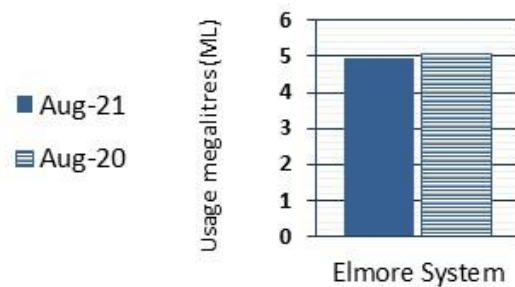

Demand comparison

The graph below shows cumulative water use for the Elmore System compared with the same period last year and estimated demand.

Monthly use by town

The graph below show this month's water use for the Elmore System compared with the same period last year.

Groundwater System: Trentham

The Trentham System only supplies the town of Trentham.

Raw water is supplied from two sources: a natural spring that fills two storages, and a groundwater licence for 103 megalitres per year.

Goulburn-Murray Water manage groundwater resources in the Central Victorian Mineral Springs Groundwater Management Area.

Water Summaries are prepared each month to provide current water resource information.

Our Urban Water Strategy outlines our water supply initiatives to meet our region's residential, business and community water needs for the next 50 years.

Our water supply systems have independent sources of water and supply constraints. Please ensure you read the update relevant to your town.

Available raw water supply

Groundwater licence	Our storage volume this month	Use to date	Total Available (Megalitres)
103 ML	89 ML	20 ML	192 ML

The graph below shows the raw water 12 month supply and demand outlook for the Trentham System.

Further system information

- > **Bulk entitlement volume**
- 120 ML
- > **Groundwater licence volume**
- 103 ML

- > **Allocation volume**
Bulk Entitlement - 120 ML
Groundwater - 100% - 103 ML

The bulk entitlement allows up to 120 megalitres per year averaged over a three-year period.

The estimated annual spring flow is 84-145 megalitres depending on preceding seasonal conditions, i.e. dry or wet respectively.

The spring flows into two surface storages that have a combined volume of 90.5 megalitres.

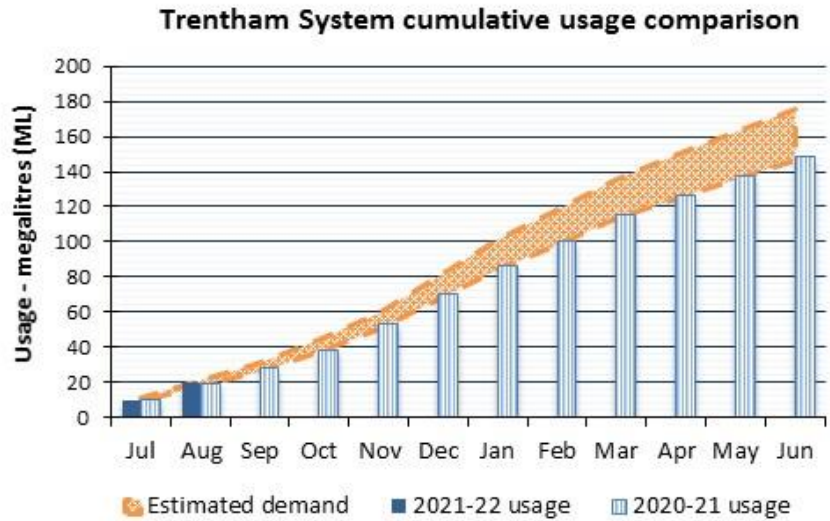

Groundwater can supplement the natural spring when needed.

> **Water restriction outlook**

Permanent Water Saving Rules (PWSR) currently apply.

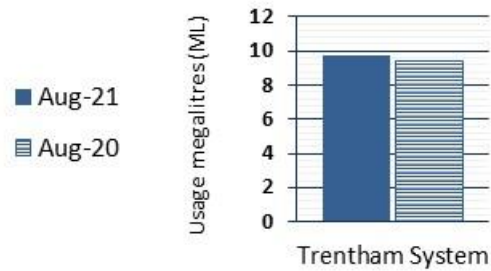

Demand comparison

The graph below shows 2020-21 cumulative water use for the Trentham System compared with the same period last year and estimated demand.

Monthly use by town

The graph below show this month's water use for the Trentham System compared with the same period last year.

Loddon Wimmera System

August 2021

The Loddon Wimmera System supplies Borung and Wychitella from the Wimmera Mallee Pipeline.

Korong Vale, Wedderburn, Bridgewater and Inglewood are supplied from the Wimmera Mallee Pipeline and South West Loddon Pipeline.

Laanecoorie, Tarnagulla, Dunolly, Bealiba are currently supplied from the Loddon River.

Water Summaries are prepared each month to provide current water resource information.

Our Urban Water Strategy outlines our water supply initiatives to meet our region's residential, business and community water needs for the next 50 years.

Our water supply systems have independent sources of water and supply constraints. Please ensure you read the update relevant to your town.

communications@coliban.com.au

Available raw water supply

Carryover last year	Allocation to date	Spillable water ¹	Allocation Trade ²	Use to date ³	Total Available (Megalitres)
201 ML	821 ML	0 ML	0 ML	71 ML	951 ML

¹ Water spilt and held in the spillable water account.

² Seasonal allocation water sold during month, year or transferred to a trading account.

³ Includes combined usage in the Loddon and Wimmera Systems

The graph on the next page shows the raw water 12 month supply and demand outlook for the Loddon Wimmera System.

Further system information

> Entitlement volume

300 ML Wimmera Bulk Entitlement
110 ML Off-season water allowance
820 ML Loddon Bulk Entitlement

> Allocation volume

Wimmera BE - 43% - 129 ML

Off-season water allowance - 100% - 110 ML

Loddon BE

- Carryover volume 8 ML
- Allocation 71% - 582 ML %

Under the Loddon Bulk Entitlement the minimum allocation is 50%. The maximum volume that can be held is 100% of entitlement including carryover. The maximum carryover is 50% of entitlement.

Allocation trade

Seasonal allocation against bulk entitlements and water shares can be traded on the water market.

> Spillable Water Account

For the Wimmera BE, volume held in excess of 100% of entitlement is held in a spillable water account until by the Resource Manager (GMMW) declares a low risk of spill whereby it is then available for use, or it spills. A low of spill was declared on 1 July 2020.

For the Loddon BE there is no spillable water account and the volume that may be held is limited to 100% of the BE.

> Water restriction outlook

Permanent Water Saving Rules (PWSR) currently apply.

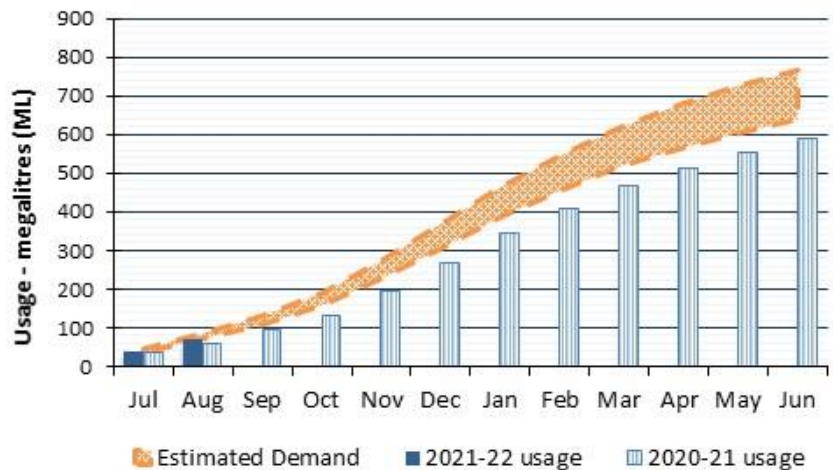

**12 month supply and demand outlook
Loddon Wimmera System**

Demand comparison

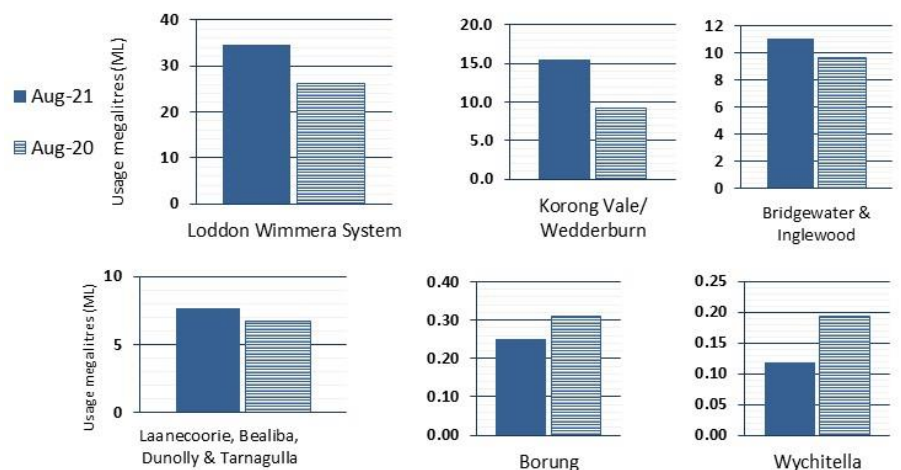

The graph below shows cumulative water use for the Loddon Wimmera System compared with the same period last year and estimated demand.

Loddon Wimmera System cumulative usage comparison

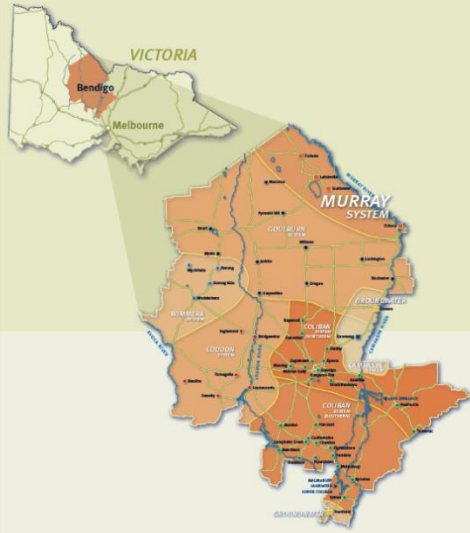

Monthly use by town

The graphs below show this month's water use for each town, compared with the same period last year.

Murray System

August 2021

The Murray System supplies the towns of Cohuna, Echuca, Gunbower and Leitchville.

Raw water is supplied from the Murray River where flows are regulated by Goulburn-Murray Water.

Water Summaries are prepared each month to provide current water resource information.

Our Urban Water Strategy outlines our water supply initiatives to meet our region's residential, business and community water needs for the next 50 years.

Our water supply systems have independent sources of water and supply constraints.

Please ensure you read the update relevant to your town.
