

Contractor Registration

Chlorine disinfection and subsequent water quality sampling must only be performed by contractors registered with Coliban Water, after appropriate competencies have been demonstrated. Developers are required to use the approved contractors for any such works.

Required Competencies

Proof of completion of the following units of competency under the current National Water Training Package must be provided to Coliban Water, in order to be registered as an approved contractor. Recognition of prior learning will be accepted if signed off from an RTO.

- NWPNET018: Disinfect Network Assets, or a superseded equivalent,
- NWPGEN020: Sample and Test Source or Drinking Water, or a superseded equivalent.

A list of RTOs who can deliver this training can be found on the WIOA website: [Training & Courses - WIOA](#).
