

Bag it, bin it...

...**don't** flush it!

On a daily basis, without realising it, the average household contributes to:

- ❌ **blocked pipes;**
- ❌ **sewer overflows; and**
- ❌ **environmental pollution**

Avoid sink sins!

Use a sink strainer to collect scraps for the compost or bin

Compost vegetable scraps, tea-leaves, coffee grounds and eggshells

Scrape your plates well, into the bin or compost

Pour used cooking oils into an empty container and place in the bin

Toilets – trash it don't flush it

Put all cotton buds and sanitary items in the bin

Trash all your toiletries

Bin disposable wipes

Protect your drains

Use a low phosphorus washing powder that is environmentally friendly

Keep the lid on paints and chemicals

Store leftover oil and grease in a sealed container and put it in the bin

All sorts of rubbish blocks sewer pipes and needs to be removed before we can treat wastewater for reuse.

So bag it and bin it – don't flush it or wash it down the sink or drain
